### **DETAILED ACTION**

**The preliminary amendment dated 1-7-02 is acknowledged.**

**Claims included in the prosecution are 1-28.**

#### ***Claim Rejections - 35 USC § 112***

**1. The following is a quotation of the second paragraph of 35 U.S.C. 112:**

**The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.**

**2. Claims 1-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.**

**Claims 1 and 16 recite ‘compound containing a polyalkylene glycol moiety’.**

**Clarification is requested as to what this compound is since a careful evaluation of the specification indicates the use of polyalkylene glycol as such and not a compound having polyalkylene glycol. Also unclear is what applicant intends to convey by ‘compound has two polyethylene glycol groups’ as recited in claims 6 and 20. Does it mean a triblock polymer wherein there are two polyalkylene glycol moieties attached? Instant specification does not provide an adequate description of the compounds. Contributing to the confusion is the language in the dependent claims 7 and 21 which refers to polyethylene glycol in singular and then recites the molecular weight range. Do both polyethylene glycol moieties have the same molecular weights? Clarification is requested.**

***Claim Rejections - 35 USC § 102***

**3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:**

**A person shall be entitled to a patent unless -**

**(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.**

**4. Claims 1-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Tagawa (5,264,221).**

**Tagawa discloses liposomal compositions wherein the liposomes have maleimide residues on the surface. A protein (monoclonal antibody) and residues of a compound having polyalkylene glycol moiety are bonded via respective groups to the maleimide residues. The liposomes encapsulate the anti-cancer drug, adriamycin (note the abstract, col. 2, line 45 through col. 5, line 27 and examples). The mol. percent of the bonded compound as disclosed in the reference on col. 4, lines 59-68 appear to fall within the claimed range. The degree of polymerization of PEG is 20-400 as noted from col. 4, line 20 which corresponds to instant molecular weights.**

**The examiner requests copies of 1449 dated 1-25-02 (papers 6 and 7) since they are not in the file.**
